
Worldwide, over 3 million people die annually from COPD. ¹

In the United States, an estimated 16-24 million adults are living with COPD. ²

Approximately 85-90% of COPD cases are caused by cigarette smoking. ²

Exposure to air pollution, coal dust, fumes, and other irritants can cause COPD. ²

COPD is the third-largest killer in the United States. 3

COPD research funding is less than 10% than that of cancer and heart disease. ³
